

Integrated Transport Studies

Bitzios Consulting has a growing reputation for successfully completing integrated transport studies for local and state governments, covering LGA-wide, town centres and precinct master plans. This is because our staff have the unique ability to use broad transport planning experience to interpret analytical outputs specifically in terms of what they mean for the local area. We understand the level of detail can vary considerably; and drawing from our extensive experience in these types of studies, we

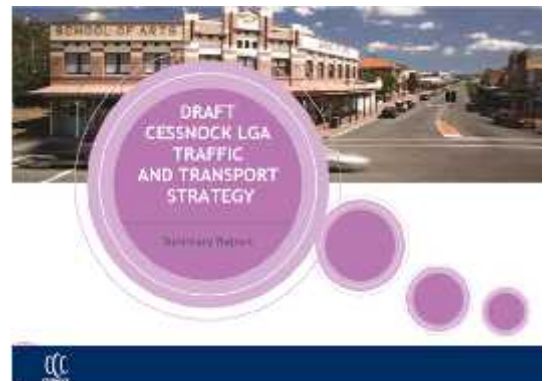

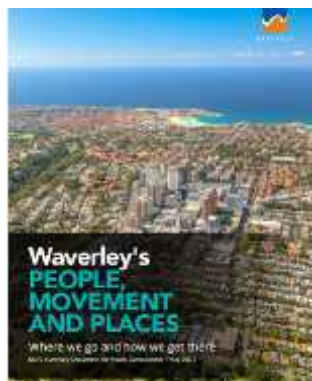

customize the modelling/analysis applications used to suit the specific needs and constraints of each project.

Our ability to consider the needs of all transport modes in assessing local networks or intersections is a key differentiator as is our approach of understanding, in detail, the local travel patterns and travel needs.

We believe that our integrated transport are at the forefront of contemporary transport planning.
